### **Mini-Brute II**

Elk Grove Village – September, 2009. Delco Cleaning Systems is proud to introduce the second generation Mini-Brute II hot water pressure washer. Built on the rugged Mini-Brute frame, the Mini-Brute II boasts a new triplex pump and electric motor combination that delivers more water flow than the previous Mini-Brute. “Increasing the water flow up to 2.2 GPM will really help our customers clean with hot water”, noted Frank Rostine – Vice President of Sales. “Customer feedback on the Mini-Brute noted the overwhelming satisfaction with the rugged frame and dependable burner, but there was a desire for more flow to wash away the loosened debris.”

The Mini-Brute II continues the tradition with a compact vertical burner system mounted on the standard 2-wheel frame. Powered by 120VAC & diesel fuel, this efficient hot water pressure washer quickly heats the water above 140° to speed cleaning of oil, grease, and other contaminants from tough surfaces like restaurant docks, commercial parking lots, municipal docks, barns & stalls, and other environments that need the power of hot water. Manufacturing will continue in the new 228,000 sq. ft. plant in Decatur, Arkansas and distributed by hundreds of Delco Dealers across the United States.

The entire line of products can be found on [www.delco-cleaning.com](http://www.delco-cleaning.com), including our Hot Water Skids and Portable Machines.
